

LabelDirect Templates

These templates correspond to their Advanced Labelling Order Codes.

If you are unsure **which version of LabelDirect** you have, click the 'Help' menu and select 'About LabelDirect'. Otherwise click a Version 1 template which, in most cases, will upgrade automatically when opened by a later version.

Each time you edit a downloaded label it is advisable to click: **File > Save As** and save it with a suitable name to preserve the original template unaltered for further use.

If you have a Pro 200 or Pro 300 LabelStation please note that template 97-VRAP-0425W (Q-VSL-0425W) must be used in conjunction with special guides, order code: Q-LSTGUIDE.

Q-LSTGUIDE in use with heat-shrink tube

And finally, please note that certain labels have recently been renamed, e.g.
97-VRAP-0425W is now called Q-VSL-0425W
97-VRAP-0725W is now called Q-VSL-0725W etc.

LabelDirect Version 1

With a little dexterity it is possible to rewind your horticultural labels while printing them, then return them to the printer upside down for 'both sides' printing. On the second run, use the appropriate 'Flat End First' template.
